*Better to explain the price in a while
Do not apologize for the quality of life!*

SUPER WATER RESISTANT-GERMAN TECHNOLOGY - WARRANTY 10 YEARS

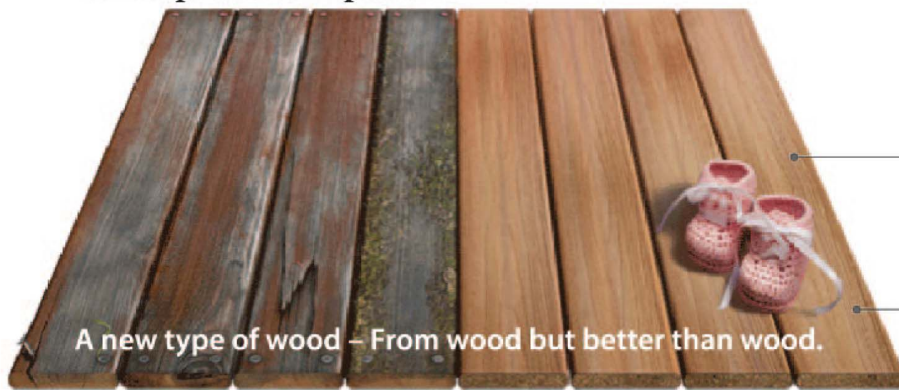

MORE THAN NATURAL

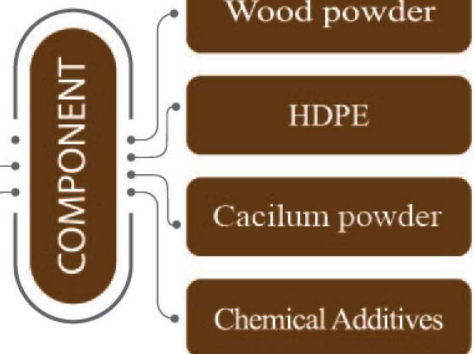

What is Wood Plastic Composite(WPC)?

WPC is a material that is a mixture of wood fiber, plastic, and some type of binding agent (special receipt of antioxidant, UV stabilizer, lubricants, pigments, ect.). These ingredients are put together and extruded with professional equipment under high temperature perfectly integrated with the advantages of both wood and plastic to form a material that is denser, stronger, and heavier than wood alone, a **wood-plastic composite**

A new type of wood – From wood but better than wood.

Why Composite Wood?

Various colors

Natural wood texture

Fire-retardant

No need to paint

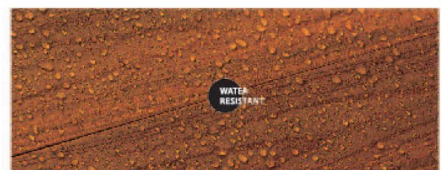

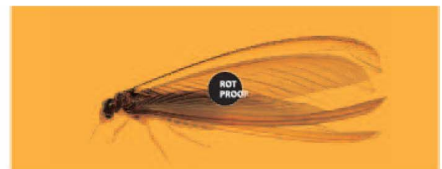

Toxin-free

Lightweight

Modular design, fast installation

ENVIRONMENTAL PROTECTION

Make your life closer to nature

Innovative Products Make Innovative Projects

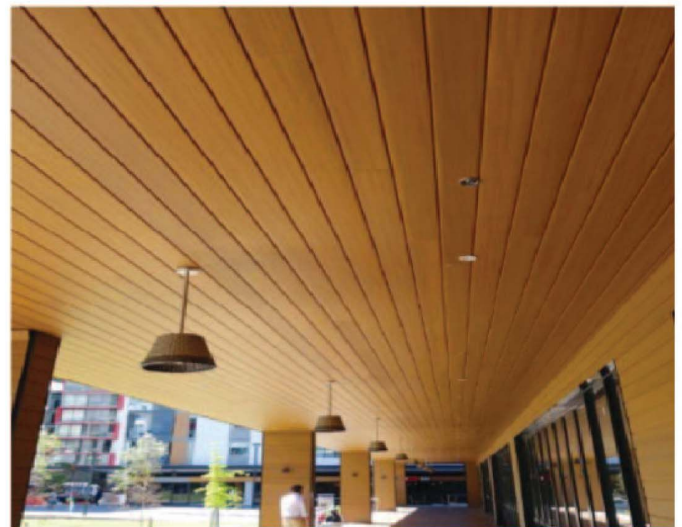

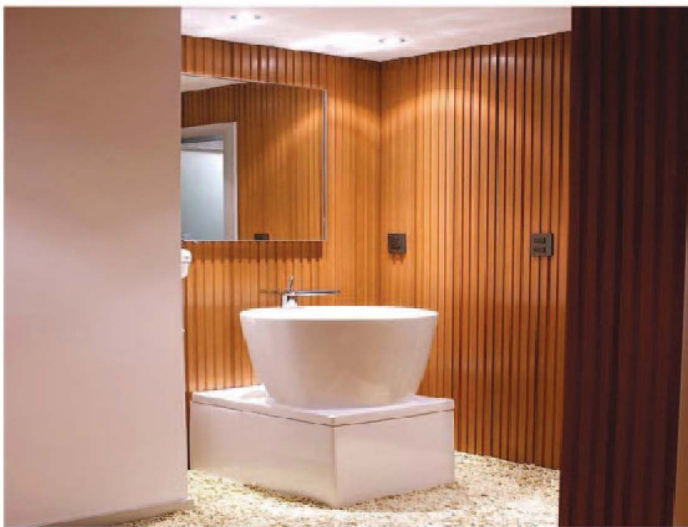

Combine eco-friendly with architecture beauty, it has always been regarded HWOOD's responsibility to the world. Pursuing low carbon and green product reflect one core of HWOOD's social responsibility. We not just advocate a concept of environment friendly, but also improve greenism with practical action.

COMPOSITE MATERIALS ARE ECO-FRIENDLY AND TOXIN-FREE.

Fibecon composite is made from locally-sourced recycled plastic, lumber mill scraps, and other materials. Using these materials means we prevent more than 60,000 tons of plastic and other waste from ending up in landfills or incinerators every year. Our composites prevent further often found in pressure-treated lumber and are manufactured in a process that produces zero water waste.

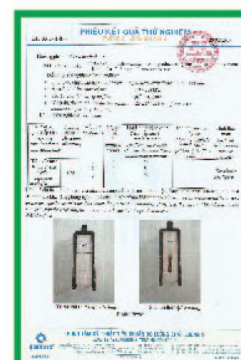

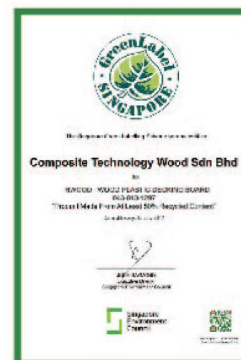

Save Tree, Beautify Home!

Comparison of Composite Wood Vs Natural Wood

Characteristic	Composite Wood	Natural Wood
Quality consistency	Yes (by manufacturing, QA, QC)	No (natural resources)
Prices & Supplies consistency	Yes (by manufacturing, controllable)	No (subject to availabilities)
Sanding, Painting & Varnishing Preparation	Not required (pre-finished surface)	Required
Process time	Shorter (Factory -- User)	Longer (Forest -- Sawmill -- User)
Eco - friendly	Yes (made from bio-waste)	No (reducing natural resources)
Installation Method	C-Channel suspension system (similar to plaster ceiling method)	Conventional carpentry method
Installation Cost	Range : RM 1.50 - RM 2.50/SE	Range: RM 3.50 – RM 4.50/SF
Installation Speed	Faster (able to complete within a day)	Slower (unable to complete within a day, due to painting / varnishing required)
Termite resistance	Excellent	Depends on wood species or additional treatment required
Long term maintenance cost	Very low	Re-varnishing works required

What is PVC material?

The term PVC stands for Polyvinyl Chloride (CH₂-CHCl). This is a corrosion resistant material and is very flexible. The popularity of PVC stems from the fact that it is easily moulded and inexpensive. It can withstand water and has a reasonable tolerance to temperature though it is not an excellent material for high temperatures.

What is PVC panel?

Our PVC panel is a system of wet wall panel which constructed of PVC resin and calcium carbonate, covered on the face with various patterns to the rear of the panel, it is the perfect choice for cost-effective showers, wet rooms, and other wet & dry wall applications. It keeps water away and gives pathogens no place to grow.

WHY DO YOU CHOOSE PVC PANEL?

- ROT PROOF

- NO TOXIC RELEASE

- FIRE RESISTANT

- HARD AND SMOOTH SURFACE

- EASY TO INSTALL

- WATER RESISTANT

- LOW MAINTENANCE
